## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-26 and 29-44 are allowed.
2. The following is an examiner's statement of reasons for allowance: As mentioned in the prior Office action mailed August 23, 2005, at pages 7 and 8, no prior art has been found to disclose or suggest analyzing image-distortion characteristics of an image data channel so as to define attributes of an encoded linear matrix image, the attributes defined such that a transformed linear matrix image formed by distorting the encoded linear matrix image according to the image-distortion characteristics is reconstructable into the linear matrix image, as recited in base claim 18; or decoding a header section of a received linear matrix image, analyzed to determine image-distortion characteristics of an image data channel, according to the image-distortion characteristics so as to recover at least one encoding parameter previously used to encode the binary data, as recited in base claims 19 and 39 and similarly recited in base claims 37, 41 and 43; or an encoded linear matrix image representative of binary data, including a predetermined tuning pattern proximate a detection key, the predetermined tuning pattern comparable to a transformed tuning portion of a transformed linear matrix image so as to define image-distortion characteristics of the channel, as recited in base claim 31.

Also as set forth in the prior Office action, no prior art has been found to disclose or suggest encoding a data section of the encoded linear matrix image, the data section having a plurality of regions of colored data markings, each of the data marking regions

representative of a predetermined quantity of the binary data, as recited in claim 7; or wherein the distortion includes rendering the encoded linear matrix image with a web browser to form a partially-transformed linear matrix image, as recited in claim 29.

These claims have been rewritten in independent form.

Base claims 1, 17, 36, 38, 40 and 42 have been amended to indicate that the encoded linear matrix image, resulting from the encoding of binary data, includes at least one encoding parameter. This added limitation is not disclosed or suggested in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
